

CRYOSPHERE COMPUTING PLATFORM

CryoStack

Ice-sheet modeling
without the setup barrier.

CONFIGURE • LAUNCH • MONITOR • VISUALIZE • DOWNLOAD

CryoStack provides browser-based access to supported computational ice-sheet simulations and ensemble data-assimilation workflows on remote and Slurm-managed HPC systems.

Researchers work through guided applications while computations continue to use their own institutional HPC identity and configured scientific software environments.

01 Configure

Choose ISSM or Icepack examples and set model and run parameters in the browser.

02 Connect

Use the CryoStack Connector with your own institutional HPC identity.

03 Launch + monitor

Configure Slurm resources, submit jobs, inspect status, and tail run logs.

04 Inspect + retrieve

Preview supported results and download managed results and figures.

05 Assimilate

Configure ICESEE ensemble data-assimilation workflows through its dedicated application.

06 Learn

Follow application Getting Started guides, user manuals, and technical resources.

WHO IS IT FOR?

Ice-sheet researchers • Students and educators • Observational scientists

New computational modelers • Teams building reproducible supported workflows
